1. Executive summary

ShopSmart recorded 7.58 billion in sales across 50,000 orders from 5,000 customers in 2025, an average of 151,505 per order. Performance is remarkably even: no single product, store, customer or month dominates. Beauty is the leading category (23.3% of revenue), the South is the leading region (32.0%) and December was the strongest month.

Key Findings

- **Sales are broad-based.** The top product is 0.29% of revenue, the best store is about 6% above the weakest, and the top customer is under 0.06%.
- **Beauty and the South lead.** Beauty earns 1.76B and the South 2.42B, helped by the South having the most stores (8).
- **Revenue quality is the issue.** Cancelled and pending orders make up two thirds of the revenue total.

Answers to the ten business questions

#	Question	Answer	Additional notes
1	**Highest-revenue product**	Home Item 400 (PROD0400)	Only 1.0% ahead of the runner-up. Sales are spread very evenly across 500 products.
2	**Best-performing store**	STR015, ShopSmart Lagos	Just 0.2% ahead of second place. Best to worst store is only 6%.
3	**Category that sells most**	Beauty	23.3% of revenue, and also the most orders.
4	**Highest-revenue month**	December	February is lowest (566,592,552). Swings are modest, with no strong seasonality.
5	**Customers who spend most**	Margaret Hawkins, Andrew Martin, Joseph Collins	Even the top customer is under 0.06% of revenue, so there is no customer concentration risk.
6	**Most frequently returned products**	Beauty Item 114, Home Item 263, Home Item 5	The first two have 11 returns each and the third 10, against about 5 on average: a watchlist, not a defect signal.
7	**Supplier with most products**	Dyer LLC Supplies (11 suppliers tied)	The maximum is 2 products per supplier; all other suppliers provide 1.
8	**Stores with low inventory**	STR006 and STR014 (3 low lines each)	21 of 500 stock lines are at or below reorder level, across 14 stores. Thinnest in units: STR011 (2,570).
9	**Best-performing region**	South	32.0% of revenue, then East 28.0%, North 24.2%, West 15.9%. Revenue per store is similar across regions.
10	**Category to invest in**	Beauty	Largest revenue and most orders. Its margin is the lowest but only about 1.3 points below the best.

Category analysis

The scorecard compares the five categories on revenue, orders, returns, catalogue margin and stock value.

Category	Revenue	Share	Orders	Return rate	Margin	Inventory value
Beauty	1,762,500,500	23.3%	11,809	5.08%	28.8%	799,158,528
Groceries	1,576,700,404	20.8%	10,352	4.58%	29.4%	658,630,181
Electronics	1,528,676,884	20.2%	9,969	4.80%	30.1%	571,402,556
Fashion	1,414,091,546	18.7%	9,260	4.83%	29.9%	628,550,682
Home	1,293,280,752	17.1%	8,610	5.13%	29.4%	511,278,871

- **Beauty** has the largest revenue and the most orders. Its margin (28.8%) is the lowest of the five, but only about 1.3 points below Electronics (30.1%), so volume matters more than margin here. Stock value is also highest (799M), so inventory already follows demand.
- **Electronics** has the best margin (30.1%) and the third-largest revenue, which makes it the natural second investment.
- **Home** is the smallest category (17.1%) and has the highest return rate (5.13%), with Beauty close behind (5.08%).

Recommendations

1. **Report revenue on completed orders.** Agree a single revenue definition, set targets to reduce the cancelled and pending share, and review causes by sales channel and payment method.
2. **Invest in Beauty first, then Electronics.** Beauty is the largest category, so growth there moves the total most; Electronics has the best margin. Hold back on Home until its return rate is understood.
3. **Fix stock and data controls.** Replenish the 21 low-stock lines, starting with STR006 and STR014, and add checks so that order prices follow the catalogue and returns can only be logged against completed orders.

Risk and opportunity

Risk: unreliable revenue and returns data. If targets or investment decisions are based on the 7.58B headline, about two thirds of that amount is not from completed orders. Returns logged against cancelled and pending orders, refunds larger than the sale, and order prices that ignore the catalogue could all distort margin and growth decisions.

Opportunity: membership tiers do not yet change behaviour. Gold (2.57B), Silver (2.55B) and Bronze (2.46B) customers spend almost the same, only 4% apart from top to bottom. Redesigning tier benefits to lift order value across the whole 5,000-customer base is a low-risk growth lever.
